

Digital Response To World Pollution

PROBLEM

The world is currently facing an unprecedented challenge due to ongoing war in Ukraine and the resulting energy and financial crisis. The escalating conflict has led to disruptions in the supply of natural gas and other forms of energy,

Families are struggling to heat their homes, businesses are struggling to keep the lights on, and many people are facing the prospect of being unable to afford basic necessities.

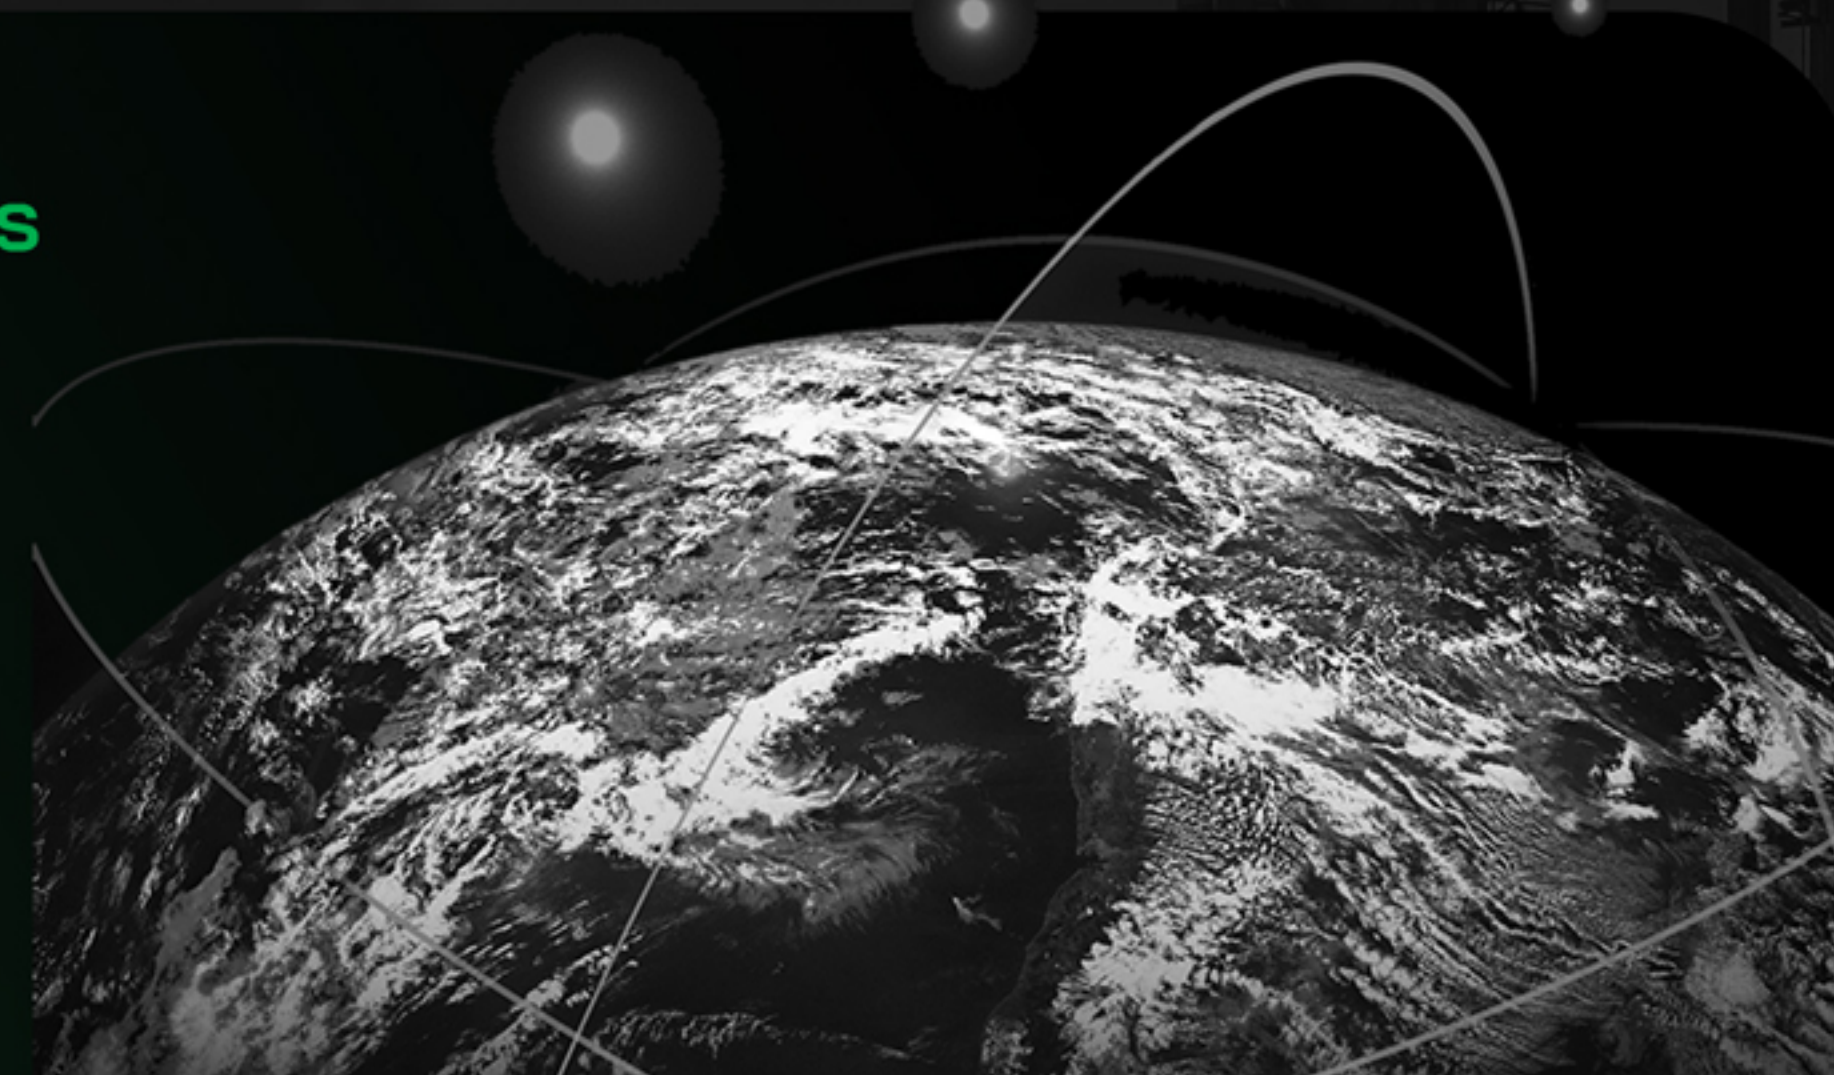

The building blocks of the CleanCarbon project are physical Waste-to-Energy UHTG installations.

UHTG stands for Ultra-High Temperature Gasification. It's a patented technology recently developed in Europe.

It offers a new standard of efficiency, low cost, and sophistication in waste treatment and energy recovery.

Main advantages of our systems

- ✓ Full carbon conversion
- ✓ No toxic residue
- ✓ No fire and no smoke
- ✓ Highest energy recovery
- ✓ Compliant with regulations
- ✓ Efficient and 100% green

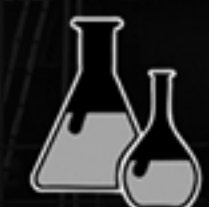

Our installation will produce syngas that contains between 40-75% hydrogen

Direct use through burning

Production of electricity

Production of chemicals

Liquid fuel e.g. methanol, diesel

Hydrogen separation

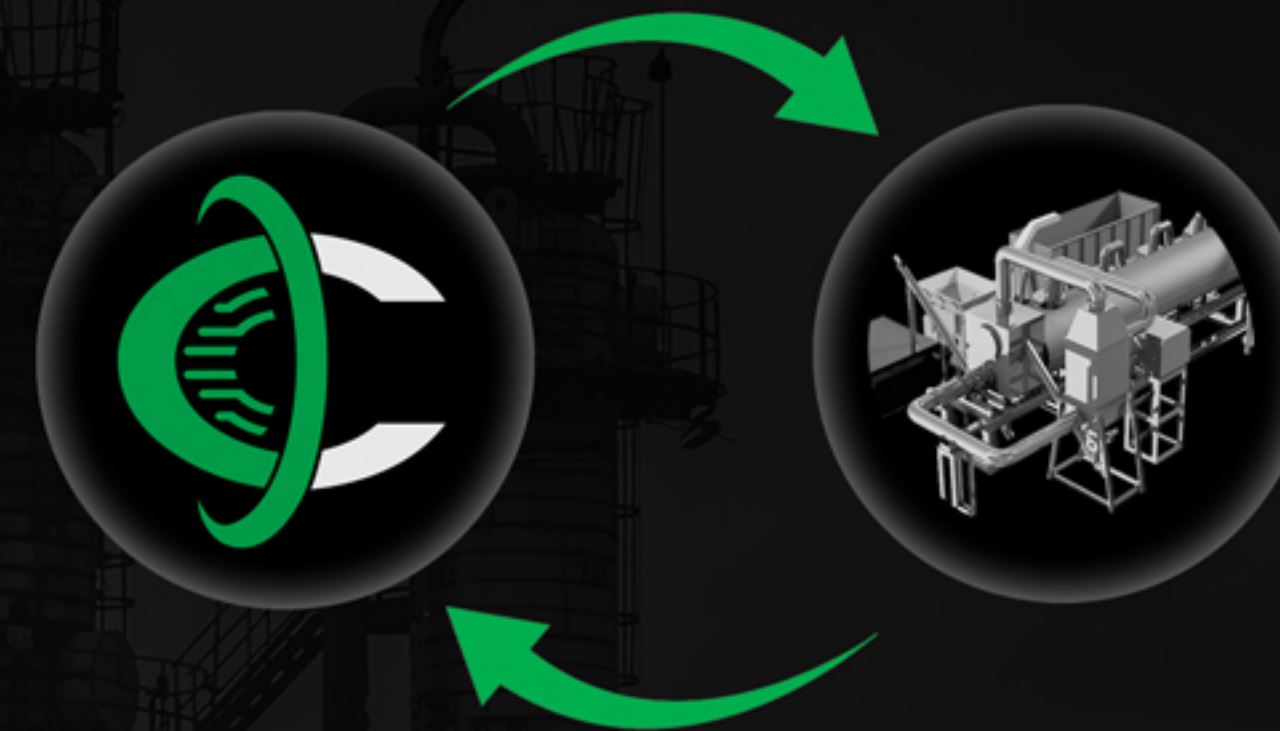

Use of waste heat

SOLUTION

We believe that new emerging technologies are the missing pieces to create sustainable long-term solutions and raise much-needed global awareness. We use UHTG and blockchain as a driving vehicle to accomplish environmental goals faster and more effectively.

Project CleanCarbon was born to address fundamental issues the companies and governments face when tackling pollution and restoring energy from waste products.

Pilot Project

The Pilot Project is being constructed in Fuerteventura, Canary Islands.

- ✓ Full support of the local government
- ✓ All necessary partnerships established
- ✓ Fully finalized legal framework

Main income streams

1. Hydrogen production

By utilizing various waste products, we will produce syngas, which is very rich in hydrogen. It will be sold and directed by pipelines to the nearby gas stations to power hydrogen cars and other future utilities.

2. Waste disposal

The local government and many local companies will pay us to utilize most of their unwanted waste products. Usually, these products end up in landfills, waiting to be utilized. This will be our second largest income stream.

3. Black carbon production

Our installation will produce black carbon. It is widely used in the photovoltaic industries as a coating layer for solar panel cells.

4. Precious metals

UHTG process recovers various precious metals present in waste products. These metals will be sold producing extra income.

5. Hydrogen cars

We plan to offer hydrogen car rental service in Fuerteventura.

Expansion plans

After the Pilot Project in Fuerteventura is completed and our business model is tested, we will begin our expansion.

The first chosen locations for expansion will be the other two large Canary Islands, Gran Canaria and Tenerife, where we have already started talks with local governments.

The next step will be a global expansion in Europe, South-East Asia and beyond.

LEGAL

CleanCarbon Solutions S.L., Spain

The company is responsible for the physical parts of the project.

CleanCarbon FZCO, Dubai, UAE

The company is licensed to offer IT-related and blockchain services.

Project funding

VC investor Our partnering VC investor is financing multiple installations in a 9-digit deal.

EU subventions CleanCarbon Solutions is awaiting funds from multiple EU subventions.

CARBO token The project has also been partially funded through a sell of CARBO token.

Pitchdeck v2.0

www.cleancarbon.io

Follow us on social media

CARBO is the first asset-backed token that effectively helps clean our planet

Network: **BEP20** Address: **coming soon**

CARBO treasury

Used as extra means to finance the project

60% Crypto trading

Our strategies involve buying dips, day trading and general accumulation of main cryptocurrencies.
medium risk, medium profits

25% Crypto liquidity pools

Investment in liquidity pools, staking and DeFi protocols of established crypto coins and tokens.
small risk, small profits

15% Crypto seed investments

Selected early-stage investments in blockchain startups that are aligned with CleanCarbon vision.
higher risk, large profits

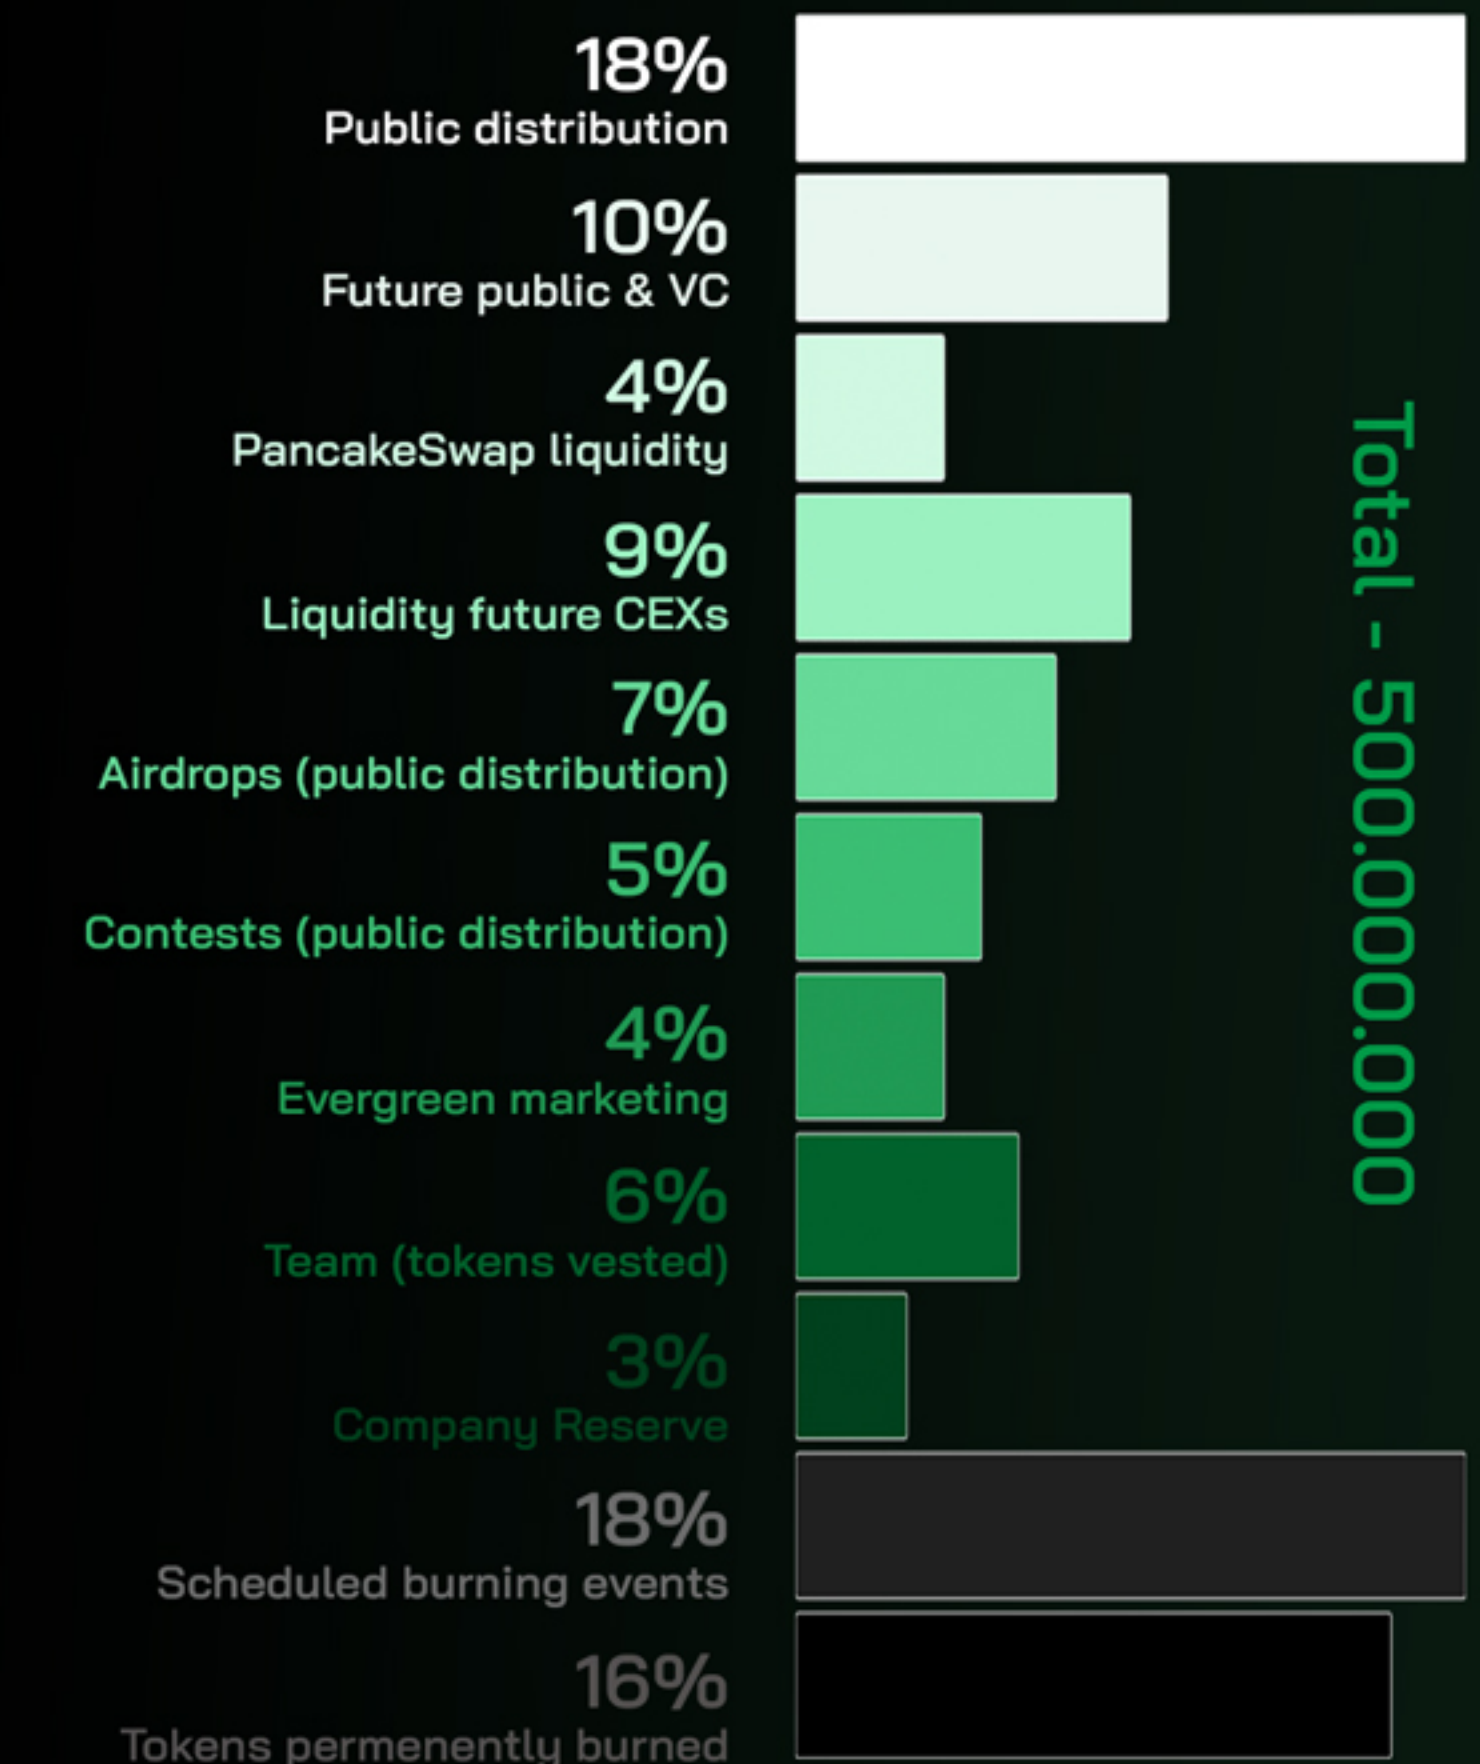

CARBO TOKEN

Mobile app (Q4 2023)

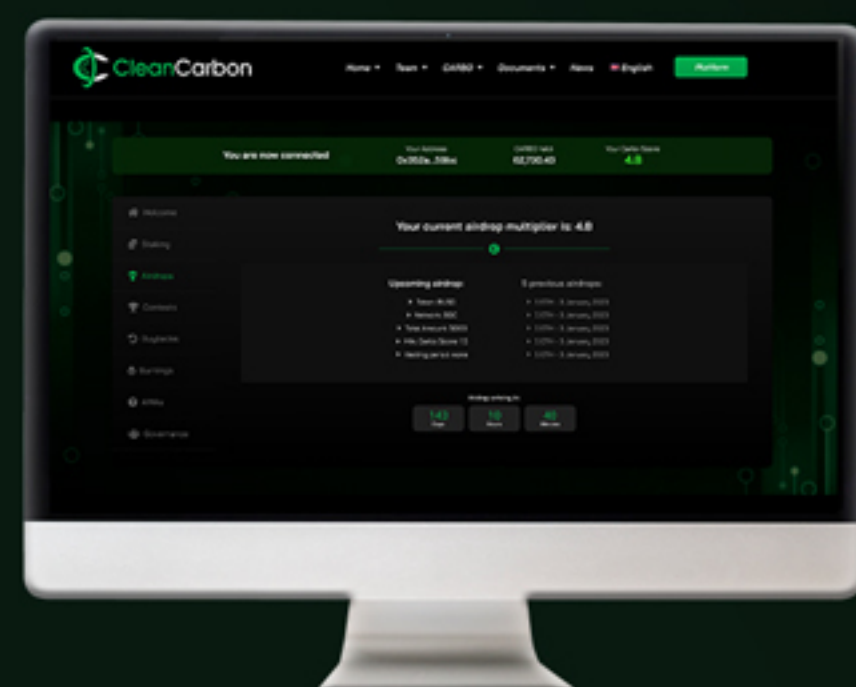

- Safe, secure and clean wallet
- Track your CARBO portfolio
- Access all CARBO utilities
- Participate in contests & airdrops
- Vote for changes in the project
- Plus many more exciting functions...

CARBO token distribution

CARBO are constantly being distributed to the public.

Digital utilities & CARBO platform

CARBO Score Our unique scoring system that helps to reward users for their activities.

Airdrops Monthly airdrops in CARBO and other tokens multiplied by user's CARBO score.

Contests Monthly trading contests with attractive rewards connected with CARBO score.

Buybacks & Burning events The list of all transactions and BSCScan links

AMAs Never miss an important update or discussion about CleanCarbon project

DAO governance Real and meaningful participation in the company decision-making.

Physical utilities & UHTG connection

Payment method

Some of our partners already accept CARBO as a payment method

Installations buybacks

A part of the profits from installations will be used to buy back CARBO

Dapp sensors

Connect sensors in our installations with blockchain applications

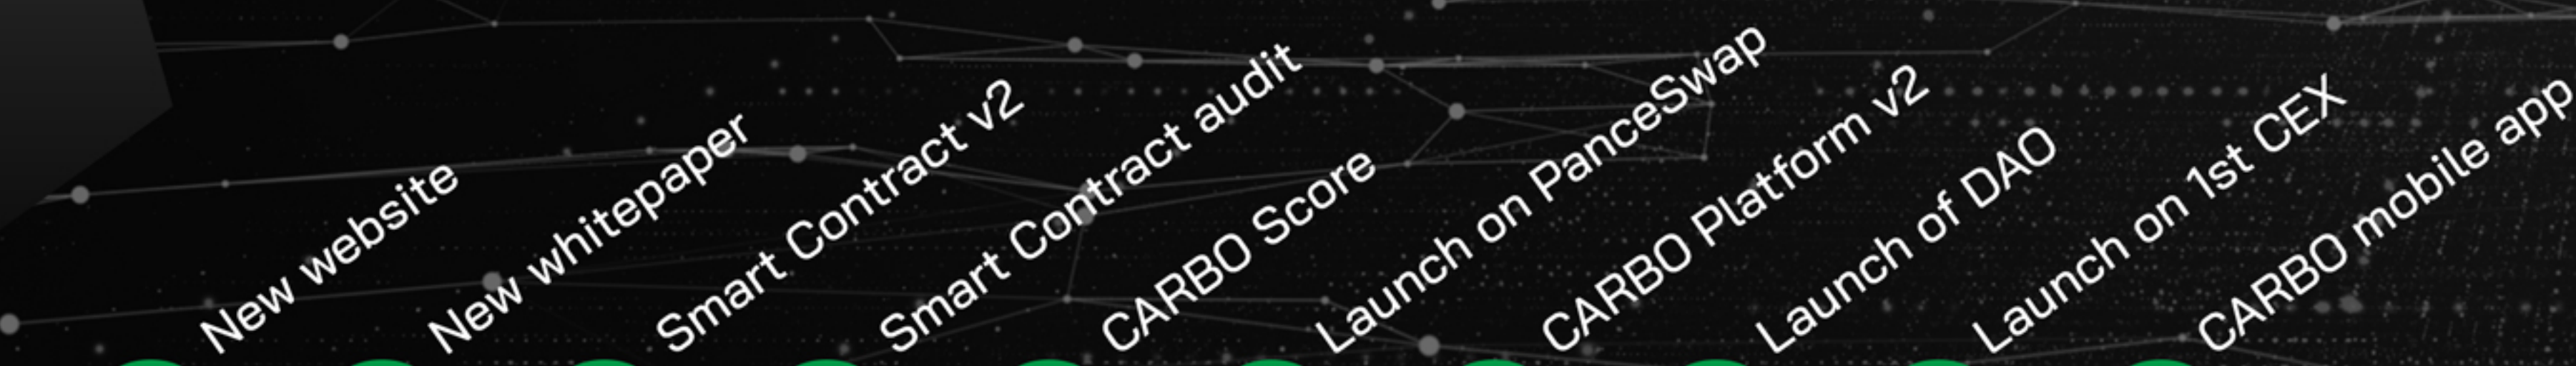

Local rewards

CARBO is used locally to reward users for sustainable behaviour

We are also working on other use cases such as: green mining or carbon points

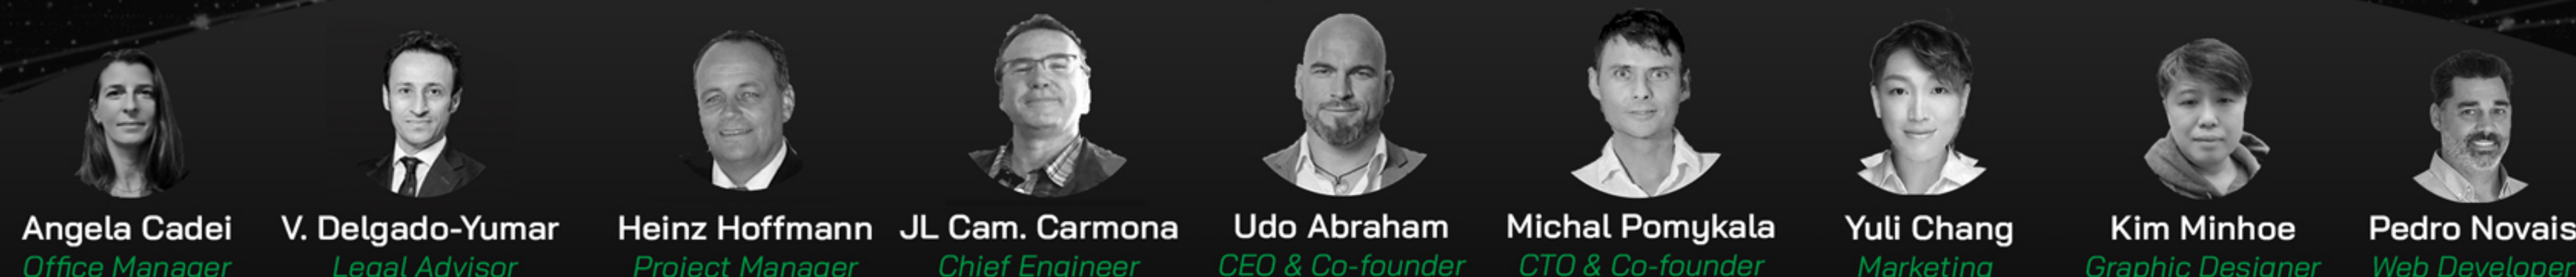

Roadmap Token

Roadmap installations
